

## ANALYTICAL BEER SERVICES

In addition to our daily barley and malt analysis we do also perform some essential brewing analysis.

As a standard service we are able to analyze following quality parameters from wort and beer:

Haze

pH

Bitterness

Alcohol

Original gravity

Degree of fermentation

Color

FAN

Those analysis are carried out according to the EBC analytica. Our laboratory is participating in the Brewing Analytes Proficiency Testing Scheme (BAPS) as an external quality assessment.

Please contact Anu El-Ghaoui, Viking Malt Laboratory Manager in Lahti Finland, to discover those laboratory services we have to offer you.
