

ENVIRONMENTAL POLICY

Cereals grow with the help of solar energy, water, carbon dioxide and nutrients. Our products are safe, good-quality raw material for the brewing, distilling, food and feed industries. Furthermore, the products do not burden the environment unnecessarily.

We use only selected renewable agricultural raw materials, and we process them efficiently and profitably. By establishing environmental objectives and following them up, we have committed ourselves to reducing the environmental impact of our activities. Studies are used to identify the significant environmental aspects of our operations and to define environmental targets. We will follow requirements of current laws and official regulations, and continuously improve our environmental system and performance. We put strict requirements to our suppliers. Skilled personnel and our production processes help us to use energy and natural resources more efficiently and to prevent pollution. If there are local commitments in connection to environmental performance there is an addition to local editions of Environmental policy.
